NEW online, live virtual workshops

"like airhacks.com, without leaving your home"

You don't like virtual workshops? See you at MUC airport: airhacks.com

>>Architecting and Designing Java, MicroProfile and Jakarta EE Applications

This live, virtual, and interactive workshop provides you the knowledge and skills to create pragmatic MicroProfile and Jakarta EE architectures. We will start with the architectures, then cover the design and internal application's structure, discuss patterns, and explore the pros and cons of different architectural styles.

We will create the perfect greenfield architectures for environments like e.g. bare metal, virtualization, containers, kubernetes (clouds) and serverless. Then we will vary the non-functional requirements and discuss the impact on architecture and design.

Attendee's questions, often taken from real-world projects, are used to map the theory to practical challenges.

"In theory, there is no difference between theory and practice; but in practice, there is."

I will often use prepared code snippets and projects to illustrate the concepts. Also: this workshop was always one of the most interactive workshops ever. Heated discussions with the audience is "business as usual" :-).

This is one of the few workshops with larger amount of slides. ...it is hard to explain architectures with code written "from scratch".

Attendee's questions, often taken from real-world projects, are used to map the theory to practical challenges.

Learn once, never migrate (...and over engineer) #usetheplatform

Mind blowing. You really broke some established patterns by choosingthese technologies. Do you consider to open the sofian repo? And if you considered somewhen during the development to use another well know library?

kaspars-on-reddit 6 points · 10 days ago

You can download it [here](#)

deadwisdom 2 points · 10 days ago

None of that is not established. In fact it's the opposite. Web components are built into the browser. JavaScript, CSS, and HTML are as well.
